

INTEGRATED LOGIC

User-Friendly Security Systems

Case Study

Project Type: Residential Retro-fit

Location: Oxshott, Surrey

Services: Security and access control

The Brief in Brief:

Smart homes systems are becoming increasingly popular. User-friendly security systems are a huge benefit of this and are becoming more common among family homes in order to create the feeling of comfort and peace of mind, even remotely. Integrated Logic were approached to plan, design and install the best solution to meet the homeowner's everyday security requirements.

Our Solution:

To meet this brief, our team removed the existing alarm and installed a brand new Texecom "Premier" Elite alarm system, specified with a satin chrome finish. This security system allows homeowners to arm the alarm with a single touch directly from an intuitive user control panel and monitor daily accesses and egresses to the property. Residents are notified via their smart devices when someone leaves or enters the building through the front door.

Integrated Logic worked closely with the homeowners to understand the cabling structure of the property to seamlessly integrate the new system which works via ID tags and a smart control panel. All wiring was fitted with the ability to add and install security cameras to monitor the exterior of the building at a later date.

The End Result:

The newly installed, fully flexible security system allows the homeowners to have their home monitored 24x7 and be notified immediately if a door opens, if the garage door is left open and more. Intelligent security puts peace of mind at your fingertips so you can rest assured that all is safe. No matter how far away you are, you have the control in your own hands.
